Subject: RE: Additional Tish Tissue Samples

Kristine

I wanted to get back to you on this, as you know, I strongly support this sampling.

In addition, please be aware I prepared a presentation for the LWG that ties the 2012 and 2014 sampling data to the site-wide modeling (QEA FATE) looking at far field and near field (as segments) calibration results. There are some interesting calibration related issues I would like to discuss with your team and am willing to provide you with the same presentation at a time and place of your convenience.

The presentation takes about 40 minutes and I suspect it will generate some discussion.

The ODEQ might also be interested in this material as it strongly supports the material presented by Kevin in Portland last Friday concerning the modeling conducted by the LWG.

Anyway, I look forward to obtaining additional tissue and sediment data at this site.

Best

Fred

I was. I think HQ is going to ask LWG to do it, but I'm not so hopeful that it would be done or done in time. If you used the same sampling plan and QAPP as GSI used in 2012, it would result in usable data.

Kristine

I appreciate your point.

If you are serious, I think I can get a 2015 Fish Tissue round...

Let me know...

Best
